

440C LOUDSPEAKER

The E-coustic Systems 440C is a version of the renowned E-coustic Systems 440 that has been modified for ceiling mounted applications. The circular baffle is designed to utilize a number of industry standard back boxes and grill assemblies that include the following Atlas-Soundolier parts:

96-8
96-8-7
96-8-10
EZ96-8
Q408

The E-coustic Systems 440 Loudspeaker is manufactured to provide the wideband power uniformity and excellent low frequency response required for E-coustic Systems acoustical enhancement. Sensitivity and power handling are an ideal match for the E-coustic Systems 08 Power Amplifier, either in single or parallel wiring configurations. Fidelity is far superior to "ceiling speakers" designed for public address and sound reinforcement - making it an excellent choice when E-coustic Systems integrate film surround, secondary reinforcement, or other audio signals.

440C LOUDSPEAKER

SPECIFICATIONS

Frequency Response:
55 Hz to 21 kHz, ± 3 dB
Sensitivity:
87 dB - 1 watt @ 1 meter anechoic
Impedance : 6W nominal, 5W minimum
Input Power Handling: 125w RMS
Connector - Spade Terminal

Size :
8 " Baffle
Weight : 7 lbs.
Shipping Weight: 11 lbs
